- Facebook maintained slightly stronger conversion efficiency despite operating at a significantly larger acquisition scale.

- Mexico and Japan emerged as the most conversion-efficient markets, despite contributing a relatively smaller share of overall traffic volume.
- In contrast, France generated traffic at a comparable scale but converted noticeably less efficiently.

- The 35-44 age cohort demonstrated the strongest conversion efficiency, potentially indicating the presence of a high-intent audience segment.

- Purchase activity was highest among male audiences, although conversion efficiency remained similar across all gender segments.
